- d. Discuss Draft 2020 Budget and Draft 2020 Assessment – General Manager provided the Board with an overview of various options for the 2020 Assessment. Options showed irrigated acre assessment rates between ~\$16.00/acre and ~\$6.00/acre. If the Board chooses to go with the lesser irrigated acre rate, there are surplus funds from 2019 that could pay for tech services that are currently budgeted for 2020 in the Prop 218 study. The Board also acknowledged that the maximum rates set forth in year 2021 per the Prop 218 Engineer’s Report will carry on in to the future, allowing the Board to assess landowners at those rates. Consensus was reached by the Board to move forward with irrigated rates set at \$6.36/irrigated acre and \$0.43/non-irrigated acre. General Manager will prepare landowner notices to go out prior to next CBWD Board meeting in March.

RE: Cuyama Basin Water District 2020 Assessment

Dear Landowner:

Enclosed you will find the 2020 Assessment Statement from the Cuyama Basin Water District (hereafter referred to as "the District"). The District is composed of approximately 83,000 acres, including most of the irrigated lands in the Cuyama Valley Groundwater Basin with the primary purpose of providing local representation on behalf of the District's landowners regarding implementation of the 2014 Sustainable Groundwater Management Act, or SGMA. This law required that a Groundwater Sustainability Plan (GSP) be developed before January 31, 2020 and that it provide for the groundwater basin being "sustainable" (generally meaning in a balanced condition over the long term) within 20 years. The District through partnership in a Groundwater Sustainable Agency (GSA) with the four counties (Santa Barbara, San Luis Obispo, Ventura, and Kern) covering the Cuyama Valley Basin and the Cuyama Community Services District submitted a GSP ahead of the January deadline. Implementation of the GSP is now commencing through activities such as monitoring and reporting.

The District will operate based upon assessments on parcels based upon 'Irrigated' or 'Non-Irrigated' classifications as established through an Engineer's Report develop through the 2017 Proposition 218 process. In summary, the per-acre maximum assessment by year established by this Proposition 218 process for both irrigated and non-irrigated lands is as follows:

<u>Land Type</u>	<u>2017</u>	<u>2018</u>	<u>2019</u>	<u>2020</u>	<u>2021</u>
Irrigated	\$26.57	\$29.93	\$22.13	\$15.94	\$16.13

The District's Board of Directors has elected to levy less than the maximum assessment for the 2020 calendar year as the current estimate for expenditures are currently less than budgeted through the Proposition 218 effort. **The 2020 Assessment Rates are \$6.36 per acre for irrigated acres and \$0.43 per acre for non-irrigated acres.** As the enclosed Statement indicates, the assessment is due and payable as of April 6, 2020, and payment is requested within sixty (60) days. If you have any questions regarding the specific information on the attached statement, please contact Matt Klinchuch at mklinchuch@ppeng.com, or (661) 616-5900.

You are encouraged to continue to participate in the SGMA process with the District. The District aims to act as the voice of its landowners and will need your input as the process moves forward.

Respectfully,

Matt Klinchuch, PE

WHEREAS, on March 22, 2017, this Board of Directors passed and adopted a Resolution that, among other things, (1) outlined procedures to be used in an assessment ballot proceeding for adopting the proposed Assessment, (2) adopted the Engineer’s Report and called for an assessment ballot proceeding, (3) scheduled the Assessment hearing, and (4) directed district personnel to prepare and send notices and ballots for the proceeding; and

WHEREAS, in furtherance of said Resolution, this Board received an Engineer’s Report, entitled “Engineer’s Report for Cuyama Basin WD: Proposition 218 Procedures for Benefit Assessment” prepared for the District in compliance with Proposition 218 by Provost & Pritchard Consulting Group, which includes a detailed roll of the parcels within the District that would be subject to the proposed assessment for the following five years (2017 through 2021); and

WHEREAS, the Engineer’s Report identified the District’s anticipated costs and required revenues; and

WHEREAS, the Engineer’s Report recommended that the District levy a proposed assessment (“Assessment”) for the following five years, made up of five components to fund the District’s operations, special activities to implement SGMA, analysis of the Cuyama Valley Groundwater Basin USGS report and Groundwater Sustainability Plan (“GSP) support, development of a GSP, and implementation of said GSP; and

WHEREAS, the Engineer’s Report recommended splitting lands within the District into Non-Irrigated Lands and Irrigated Lands as authorized by Water Code section 36579, with Non-Irrigated Lands being assessed only for District operations component of the Assessment and Irrigated Lands being assessed all components of the Assessment; and

WHEREAS, Upon tabulating the votes at the conclusion of the assessment hearing conducted May 22, 2017, the weighted ballots in favor of the proposed Assessment outweigh the weighted ballots in opposition, with the results being 2,795,984.11 votes in favor of the assessment and 170,395.45 votes in opposition; and

WHEREAS, this Assessment Ballot Proceeding were carried out in accordance with the Board of Director’s March 22, 2017 Resolution, including a hearing conducted May 22, 2017; and

Once the Assessment Book has been filed, the Assessments listed shall be due and payable to the Tax Collector of the District.
 - D. Lien.** Pursuant to Water Code Section 36825 upon filing the Assessment Book with the Tax Collector the assessment and any penalties for delinquencies shall constituent a lien on the lands the subject of the Assessment.
 - E. Notice of Assessment.** Within 10 days of the Assessment being due and payable the Assessor shall publish notice in the principle county a notice as specified by Water Code

Subject: **Updated IWFM Model Software Code**
Effects on the Cuyama Basin Water Resource Model
(EKI B70069.01)

The Cuyama Basin Water District (District) requested that EKI examine potential effects of a modeling software update on water resource management issues within Cuyama Basin.

BACKGROUND

The Cuyama Basin Water Resources Model (CBWRM or “model”) is a transient 3-D numerical finite-element groundwater flow model of the basin, based on the California Department of Water Resources (DWR) Integrated Water Flow Model (IWFM) modeling platform¹. It was created and implemented by Woodard & Curran (WC) to support the Cuyama Basin Groundwater Sustainability Plan (GSP) under the auspices of the Cuyama Basin Groundwater Sustainability Agency (GSA). The model was constructed to define management areas, develop sustainability management criteria, and predict the groundwater storage effects of various proposed water-supply enhancement projects and management actions in the Cuyama Basin (Basin). Previous work by EKI showed that an error existed in the IWFM software used to construct the model. Based on error information provided to DWR by EKI, DWR updated the IWFM model code and published the update on 5 February 2020.

METHOD

EKI obtained the new version, re-ran the CBWRM model using the same input files provided by WC, and checked for any significant changes in model results that would be relevant to the Cuyama Basin Water District (District). We used CBWRM input files without modification to re-run the model.

OBSERVATIONS

- The software update did not significantly affect model predictions.
- The new model code caused some odd local results and required a change in format of one of the input files, but only caused small changes in the modeled water budget and water levels.
- EKI used model results for the projection period 2018-2067 from runs using the old and new versions of IWFM to:
 - compare predicted water budgets and groundwater storage, and
 - compare water level changes at each hydrograph well.
- Average differences in annual groundwater storage change were minimal, about 0.2%, although certain years varied from -5.9% to +6.6% between the two software versions.
- Modeled future water levels used to delineate the Management Areas changed slightly (differences ranged from -0.05 to +0.02 ft/yr), but these differences are not significant, since the Management Area boundaries are based on a 2 ft/yr drawdown contour line.
- Other issues noted:
 - One input file (the stream specification file) required a different format, which caused the model to “crash” initially; but it was a quick fix; and
 - The new model software appears to cause a 1-day spike in “urban pumping” in one subregion. Review of the issue by DWR identified the cause as a “perfect storm” due to the logic in the code and several wells affecting each other as they try to meet demand. DWR reported that the method in which wells are set up in the model is causing several wells to adversely affect each other and the model is struggling to meet agricultural and urban demand. This one-day spike in urban pumping doesn’t appear to be a significant issue for the Cuyama model, but it’s unknown if the current well specifications in the model may be causing other issues.

CONCLUSION

The changes DWR made to fix an error in the IWFM code underlying the CBWRM do not appear to produce major differences in the modeled water budget, nor in water levels over the historical or projected future modeling period. This does not mean that the discrepancies between the model results published in the GSP and the results obtained by EKI, specifically the boundaries of proposed Management Areas in the Cuyama Basin, have been resolved. This means only that the IWFM software update does not appear to have added to the problem.

RECOMMENDATIONS

Given that the effect of the IWFM software update appears not to affect the CBWRM significantly, EKI does not recommend any further documentation due to use of the new model software of differences in Management Areas or revisions to the Parcel and Management Area table (created by EKI in December 2019) that classifies District parcels within each MA.

EKI requests authorization to proceed with some of our other tasks, as proposed in our Task Order dated 18 February 2020, including:

- a) Preparation for and attendance at a meeting with WC to discuss the discrepancies EKI has identified in model results, and obtain clarification regarding WC's method used to delineate MAs and pumping in the Basin. EKI will document the meeting and outcome in a technical memorandum (TM) and present the results to the CBGSA Board during a meeting of the CBGSA Board of Directors;
- b) Formulate a strategy to equitably and transparently address the uncertainty in MA boundaries, including a process for review and reclassification of individual parcels based on additional data and/or model runs and refinements; and
- c) Assist the District in efforts to reconcile remotely-sensed ET estimates with other methods used to determine groundwater use and fee assessments;
- d) Once data are available, perform a quality analysis and control (QA/QC) review of water level and water quality data for the 101 monitoring network wells identified in the GSP (61 of which are representative wells), to support District's annual reporting in 2021 and thereafter.
